DEAR PELICAN CUSTOMER,

After over 45 years in business, Pelican Products, Inc. understands the critical importance of lighting tools. As an avid diver since age 11, our founder recognized the need for rugged flashlights that would work underwater and would not fail. Pelican has since grown to provide a wide range of advanced lighting systems to support professionals and outdoor enthusiasts alike.

Our lighting products lead the industry in LED light output performance, and we offer more safety approved industrial lights certified for Class I, II, III Div 1 and groups ABCDEFG than any of our competitors. With a lighting product line ranging from compact to large, headlamps to right angle lights, tactical to remote area lighting, dive lights and everything in between, we are confident you will find the perfect model to fit your needs. Our lighting tools are unbeatable in lumens, longevity, and energy efficiency, plus every Pelican light boasts our world-famous Guarantee of Excellence.

We take great pride in the products we’ve created over the years for law enforcement, firefighters, military personnel, photographers and many others who have counted on the Pelican name. We would not be the global brand that we are today without the consistent support of our loyal customers.

On behalf of myself and my fellow Pelican employees around the world, we thank you for your business.

Sincerely,

Phil Gyori
Chief Executive Officer

ANSI STANDARDS (AMERICAN NATIONAL STANDARDS INSTITUTE)

Why create standards? While Pelican was one of the first manufacturers to use quantifiable test procedures, the need was recognized to develop a common language that customers could use to select the right flashlight for their specific needs. As a result, the American National Standards Institute (ANSI), with input from the flashlight industry, developed performance standards and symbols to effectively communicate a flashlight’s features and benefits.

The resulting ANSI/NEMA FL 1 Standards include the following six criteria:

STANDARDS AND RATINGS (APPLICABLE TO FLASHLIGHTS ONLY)

LIGHT OUTPUT
Light Output is the total luminous flux. It is the total quantity of emitted overall light energy as measured by integrating the entire angular output of the portable light source. Light output in this standard is expressed in units of lumens.

BEAM DISTANCE
Beam Distance is defined as the distance from the device at which the light beam is 0.25 lux (0.25 lux is approximately the equivalent of the light emitted from the full moon “on a clear night in an open field”).

RUN TIME
Run Time is defined as the duration of time from the initial light output value – defined as 30 seconds after the point the device is first turned on – using fresh batteries, until the light output reaches 10% of the initial value.

PEAK BEAM INTENSITY
Peak Beam Intensity is the maximum luminous intensity typically along the central axis of a cone of light. The value is reported in candela and does not change with distance.

WATER RESISTANT
Water Resistant // IPX4 - Water splashed against the device from any direction shall have no harmful effects.

WATERPROOF/SUBMERSIBLE
Waterproof // IPX7 – Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is temporarily immersed in water under standardized conditions of pressure and time. Submersible // IPX8 – Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is continuously immersed in water under conditions which shall be stated by manufacturer, but which are more severe than for IPX7.

GLOSSARY OF TERMS

Candela A unit of measurement of the intensity of light that is emitted by a light source in a particular direction.

Lux The unit of luminous flux in the International System, equal to the amount of light given out through a solid angle by a source of one candela intensity radiating equally in all directions.

Lumen A unit of measurement of the amount of brightness that comes from a light source. Lumens define “luminous flux,” which is energy within the range of frequencies we perceive as light.

Integrating Sphere An integrating sphere is a measurement device with an entrance port that can accept all the directional light output of the device under test, or can totally enclose the device itself. The walls of the sphere should be highly diffused with high reflectivity (>80%) and the spectroradiometer should be shielded from direct view of the device under test by a baffle system.

Rechargeable Denotes a flashlight which contains rechargeable batteries and charging station. These models are shown with the rechargeable icon.

IP (Ingress Protection) – These ratings specify the environmental protection the enclosure provides. The IP rating normally has two numbers (IPXX). The first number represents protection from solid objects or materials (dust) whereas the second number represents protection from liquids (water). With the IP rating IP 54, 5 describes the level of protection from solid objects and 4 describes the level of protection from liquids as described by the IP Rating System (Solids vary from 0-6 IP rating, Liquids vary from 0-8 IP rating).

NEW DEEP MOUNT LED TECHNOLOGY

Our engineering team has designed a new high performance LED lamp module (Deep Mount LED Module). These lights are now brighter, with close to 100% increase in lumens and a 2.5 times increase in lux value over previous versions (as well as offering a more robust design).

- **A** New deep dish reflector provides up to 2.5 times lux increase, and 100% lumen increase
- **B** Robust, over-molded polycarbonate lens won’t yellow
- **C** Opti-mechanical design gathers and focuses 100% of the light
- **D** LED is mounted directly to the PCB board, creating a strong and efficient design solution
When hazardous areas are present, you can count on Pelican’s line of safety certified lighting tools. From hand-held lights to headlamps to right angle lights, there is a safety certified light that has the features you need. Features include multiple light modes, photoluminescent bodies, dual beams, integrated battery level indicators and more. With a Pelican™ light, you can feel safe illuminating hazardous environments without being a source of ignition.

392 LUMENS 11h RUN TIME
Firefighters put everything on the line and having the correct lighting tool is critical to their safety. Right angle (90°) and articulating flashlights, often worn on turnout coats, offer hands-free performance when it’s needed the most. With extreme peak beam intensity and smoke-cutting penetration, these lights will get you in and out of tough situations safely.

REMOTE AREA LIGHTING SYSTEMS

Providing increased performance, safer working conditions, emergency preparedness and greater flexibility, Pelican’s RALS line is the modern alternative to generator based lighting:

- Silent performance
- No flammable fuel
- Eliminated trip hazards
- No exhaust fumes
- Remote activation
- Little to no heat

**PELICAN LIGHTS CATALOG**
Pelican Products offers the ultimate in private labeling. You can put your company name and logo or a special statement on many Pelican™ lights. Our in-house private label molding and production department has complete short and long run capabilities for a variety of custom applications and custom colors. We have the latest hot stamping equipment, utilizing the world’s most durable inks and foils in our screening, hot tipping, embossing, and molding programs. Laser etching is also available for many of the metal bodied lights.

**GRAPHIC DESIGN STUDIO**
Our in-house graphics studio will take your logo and size it appropriately to the flashlight of your choice.

**HOT STAMPING**
Our hot stamping department is equipped with the latest technology in custom imprinting. Minimum quantities apply.

**LASER ETCHING**
Available only on metal bodied lights.

**100% ACCURACY**
Pelican’s strict QA inspection team will check for quality of print and 100% accuracy in color and placement.
PELICAN LIGHTING TOOLS: MORE THAN JUST FLASHLIGHTS.
