

MATERIAL SAFETY DATA SHEET (MSDS)

SECTION I – PRODUCT AND MANUFACTURER INFORMATION

Product Name: NiMH Battery
 Model: MH9000D
 Chemical Systems: Nickel Metal Hydride
 Sizes: All
 Designed for Recharge: Yes

Well Link Industrial Limited
 Rm. 1116-17 Tower A, Regent Centre
 63 Wo Yi Hop Rd., Kwai Chung, NT., Hong Kong
 Telephone Number for Information: 852-24818893
 Date Prepared: January, 2016

SECTION II – HAZARDS IDENTIFICATION

- Ingestion
- Inhalation
- Skin Contact
- Eye Contact

SECTION III – INFORMATION ON INGREDIENTS

WARNING: The battery should not be opened or burned. Exposure to the ingredients contained within or their combustion products could be harmful.

MATERIAL OR INGREDIENTS		% W. t.	TLV (ACGIH Threshold Limit Values)
Aluminum	(CAS# 7429-90-5)	<2	10mg/m ³ TWA
Cobalt			
as cobalt metal	(CAS# 7440-48-4)	2-6	0.02mg/m ³ TWA (as Co)
cobalt oxide	(CAS# 1307-96-6)		
cobalt hydroxide	(CAS# 21041-93-0)		
Manganese	(CAS# 7439-96-5)	<3	0.2mg/m ³ TWA (as Mn)
Nickel			
as nickel powder	(CAS# 7440-02-0)	20-50	1.5mg/m ³ TWA (as inhalable Ni) 0.2mg/m ³ TWA (as inhalable Ni, insoluble compounds)
nickel oxide	(CAS# 1313-99-1)		
nickel hydroxide	(CAS# 12054-48-7)		

Nickel Metal Hydride Batteries
Page 2/6

Zinc			
as zinc metal	(CAS# 7440-66-6)	<3	10mg/m ³ TWA (total dust: zinc oxide)
zinc oxide	(CAS# 1314-13-2)		
zinc hydroxide	(CAS# 20427-58-1)		
Mischmetal including		<13	10mg/m ³ TWA (particulates not otherwise classified-inhalable)
lanthanum	(CAS# 7439-91-0)		
cerium	(CAS# 7440-45-1)		
neodymium	(CAS# 7440-00-8)		
praseodymium	(CAS# 7440-10-0)		3mg/m ³ TWA (particulates not otherwise classified-respirable)
Lithium Hydroxide	(CAS# 1310-65-2)	0-4	None established
Potassium Hydroxide	(CAS# 1310-58-3)	<7	Ceiling 2mg/m ³ STEL
Sodium Hydroxide	(CAS# 1310-73-2)	0-4	Ceiling 2mg/m ³ STEL
Steel	(CAS# 7439-89-6)	15-25	NA
Water, paper, plastic, other		Balance	NA

SECTION IV – FIRST-AID MEASURES

Ingestion:

Swallowing a battery can be harmful. Seek medical attention immediately. Call The National Capital Poison Control Center (202-625-3333) collect, or your local Poison Control Center (800-222-1222), day or night, for advice and follow-up.

Inhalation:

Contents of an open battery can cause respiratory irritation. Provide fresh air and seek medical attention.

Skin Contact:

Contents of an open battery can cause skin irritation and/or chemical burns. Remove contaminated clothing and wash skin with soap and water. If a chemical burn occurs or if irritation persists, seek medical attention.

Eye Contact:

Contents of an open battery can cause severe irritation and/or chemical burns. Immediately flush eyes thoroughly with copious quantities of flowing lukewarm water for a minimum of 15 minutes. Seek immediate medical attention.

SECTION V – FIRE FIGHTING MEASURES

If fire or explosion occurs when batteries are on charge, shut off power to charger.

In case of fire where nickel metal hydride batteries are present, apply a smothering agent such as METL-X, sand, dry ground dolomite, or soda ash, or flood the area with water. A smothering agent will extinguish burning nickel metal hydride batteries. Water may not extinguish burning batteries but will cool the adjacent batteries and control the spread of fire. Burning batteries will burn themselves out. Virtually all fires involving nickel metal hydride batteries can be controlled with water. When water is used, however,

hydrogen gas may evolve. In a confined space, hydrogen gas can form an explosive mixture. In this situation, smothering agents are recommended.

Fire fighters should wear self-contained breathing apparatus. Burning nickel metal hydride batteries can produce toxic fumes including oxides of nickel, cobalt, aluminum, manganese, lanthanum, cerium, neodymium, and praseodymium.

SECTION VI - SPILL OR LEAK PROCEDURES

Procedures to Contain and Clean Up Leaks or Spills:

In the event of a battery rupture, prevent skin contact and collect all released material in a plastic lined metal container.

Reporting Procedure:

Report all spills in accordance with Federal, State and Local reporting requirements.

SECTION VII - PRECAUTIONS FOR SAFE HANDLING AND USE

Storage:

Store in a cool, dry, and well-ventilated area. Elevated temperature can result in shortened battery life. Storing unpackaged cells together could result in cell shorting and heat build-up.

Mechanical Containment:

Do not obstruct safety release vents on batteries. Encapsulation (potting) of batteries will not allow cell venting and can cause high-pressure rupture.

Handling:

Accidental short circuit for a few seconds will not seriously affect the battery. However, this battery is capable of delivering very high short circuit currents. Prolonged short circuits will cause high cell temperatures that can cause skin burns. Sources of short circuits include jumbled batteries in bulk containers, metal jewelry, and metal covered tables or metal belts used for assembly of batteries into devices.

If soldering or welding to the battery is required, use of tabbed batteries is recommended.

Do not open battery. The negative electrode material may be pyrophoric. Should an individual cell from a battery become disassembled, spontaneous combustion of the negative electrode is possible. That is much more like to happen if the electrode is removed from its metal container. There can be a delay between exposure to air and spontaneous combustion.

Charging:

This battery is made to be charged many times. Because it gradually loses its charge over a few months, it is good practice to charge battery before use. Use recommended charger. Improper charging can cause heat damage or even high pressure rupture. Observe proper charging polarity.

SECTION VIII – PERSONAL PROTECTION

Respiratory Protection (Specify Type)	Not necessary under normal conditions
Ventilation	Not necessary under normal conditions
Protective Gloves	Not necessary under normal conditions
Eye Protection	Not necessary under normal conditions
Other Protective Clothing	Not necessary under normal conditions

SECTION IX - PHYSICAL DATA

Boiling Point @ 760 mm Hg (°C)	NA
Vapor Pressure (mm Hg @ 25 °C)	NA
Vapor Density (Air = 1)	NA
Density (grams/cc)	NA
Percent Volatile by Volume (%)	NA
Evaporation Rate (Butyl Acetate = 1)	NA
Physical State	NA
Solubility in Water (% by Weight)	NA
pH	NA
Appearance and Odor	Geometric solid object

SECTION X - REACTIVITY DATA

Stable or Unstable	Stable
Incompatibility (Materials to Avoid)	NA
Hazardous Decomposition Products	NA
Decomposition Temperature (0 °F)	NA
Hazardous Polymerization	Will Not Occur
Conditions to Avoid	Avoid Electrical Shorting

SECTION XI - HEALTH HAZARD DATA

Under normal conditions of use, the battery is hermetically sealed. (Note: Nickel, nickel compounds, cobalt, and cobalt compounds are listed as possible carcinogens by IARC or NTP)

Threshold Limit Value (TLV) and Source	NA
Effects of Overexposure	None (In fire or rupture situation, see section II and IV)

SECTION XII – FIRE & EXPLOSION HAZARD DATA

Flash Point	NA
Flammable Limits in Air (%)	NA
Lower (LEL)	NA
Upper (LEL)	NA
Extinguishing Media	Use water, foam or dry powder, as appropriate
Auto-Ignition	NA

SECTION XIII – Disposal Method

Disposal in accordance with Federal, State and Local reporting requirements.

SECTION XIV – TRANSPORTATION

KINETIC sealed Nickel Metal Hydride batteries are considered to be ‘dry cell’ batteries and are unregulated for purposes of transportation by the U.S. Department of Transportation (DOT), International Civil Aviation Administration (ICAO), International Air Transport Association (IATA) and the International Maritime Organization (IMO).

The only requirements for shipping these batteries by ICAO and IATA is Special Provision A199 (under 57th 2016 edition) which states ‘An electrical battery or battery powered device having the potential of dangerous evolution of heat that is not prepared so as to prevent a short-circuit (e.g. in the case of batteries, by the effective insulation of exposed terminals; or in the case of equipment, by disconnection of the battery and protection of exposed terminals) is forbidden from transportation.’

The International Maritime Dangerous Goods Code (IMDG) 35th Amendment regulates them for ocean transportation under Special Provision 963 which says the batteries need not meet the provisions of IMDG code if they are packed with or contained in the equipments. For batteries alone, if the gross mass is under 100kg and the batteries are securely packed and protected, they are not subject to other provisions of the IMDG code and can be transported as non-DG cargo

SECTION XV – REGULATORY INFORMATION

These products are “article(s)” that do not release a covered toxic chemical under the normal conditions of processing or use. They are not subject to the requirements of the Emergency Planning and Community Right-To-Know Act. Notification is not required.

SECTION XVI – OTHER INFORMATION

*The battery referenced herein is defined as “article” and is **NOT** subject to the 29 CFR 1910.1200 OSHA Hazard Communication Standard requirement or to the Canadian WHMIS requirement. Hence, a material safety data sheet (MSDS) is not required. The information and recommendation set forth herein are supplied as a service. They are made in good faith and believed to be accurate as of the date of preparation. Well Link makes no warranty, either express or implied, with respect to this information and disclaims all liability from reliance on it.*
